European Mutual Market Share 2022

The European insurance market share as
held by mutual and cooperative insurers

Foreword

The European mutual and cooperative insurance market has demonstrated remarkable resilience in spite of the challenges of the global pandemic, as indicated by the findings of the European Mutual Market Share 2022.

European mutuals and cooperatives significantly outperformed the wider European insurance market in 2020, with EUR 469 billion in premium income representing an annual contraction of -1.6% (2019: EUR 476 billion), compared to the total European insurance market's annual contraction of -6.7%.

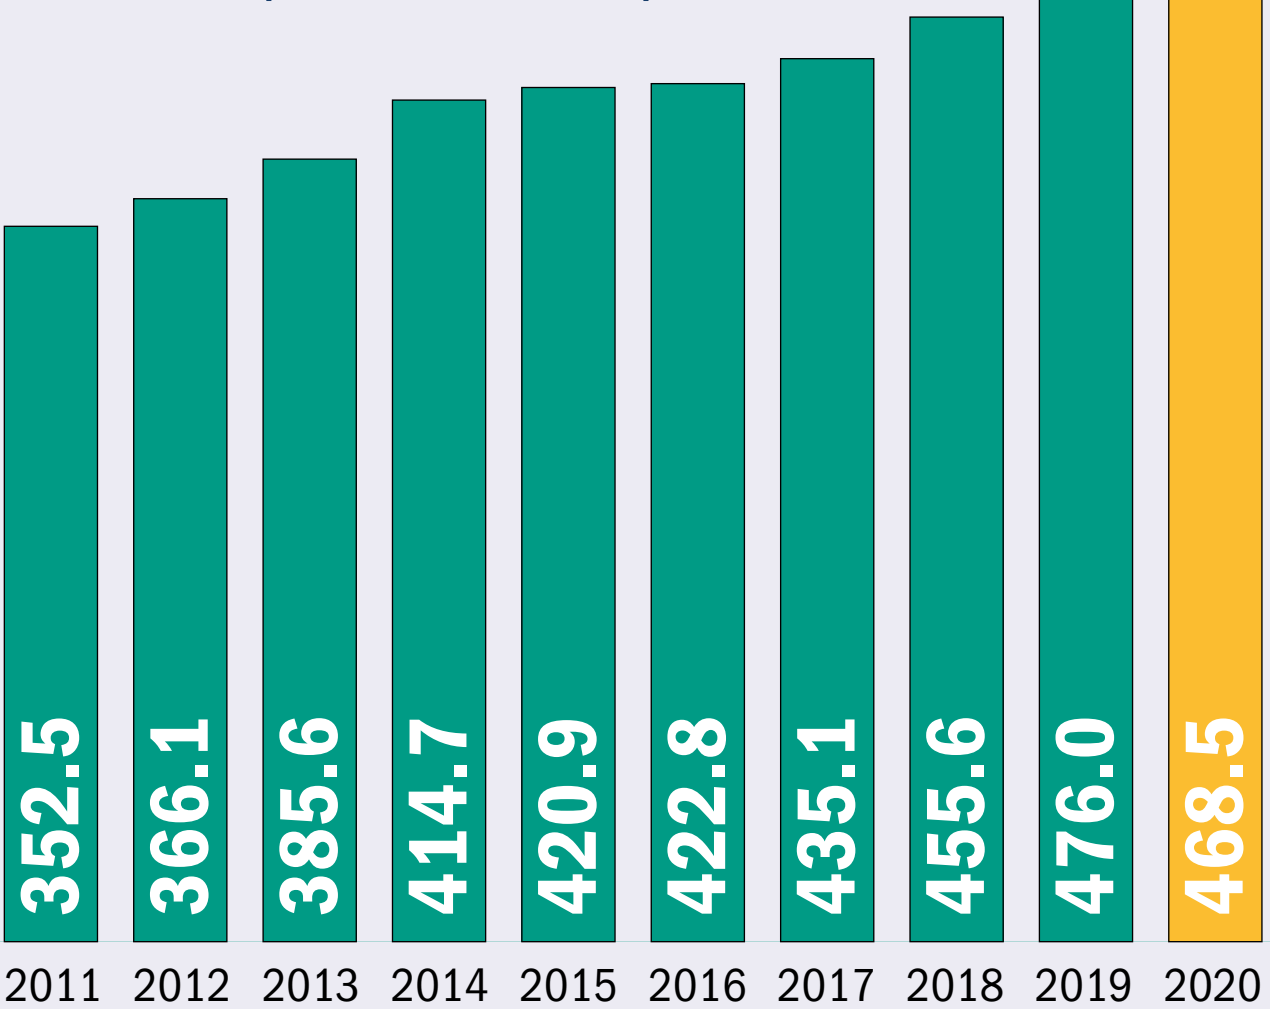

European mutuals/cooperatives also saw their share of the total European insurance market increase to a record high of 33.4% in terms of total premium volume. Similarly, European mutuals and cooperatives' market share of life business in the region increased to a record high of 25.7%, whilst their share of the European non-life market increased to 42.8%.

These outstanding results show that the mutual/cooperative insurance model is as important and relevant as ever in showing the way forward for the industry both in Europe and globally, with society's renewed focus on the value of purpose-led organisations set only to strengthen the sector further.

Mutual/cooperative market share in the 10 largest European insurance markets in 2020

The largest European insurance markets in terms of mutual/cooperative market share in 2020

- ▶ European mutuals’ market share of the European insurance market has increased to a record high of 33.4%, a 9.2 percentage-point increase from our first available figure (24.2%, 2007).
- ▶ European mutuals’ life insurance market share increased to a record high of 25.7%, an 8.5 percentage-point increase from our first available figure (17.2%, 2007).
- ▶ European mutuals’ non-life insurance market share increased to 42.8%, a 7.0 percentage-point increase from our first available figure (35.8%, 2007).
- ▶ European mutuals exceeded the total European insurance market’s 10-year premium growth in total, life, and non-life business by 17.8, 17.2, and 11.1 percentage points, respectively.
- ▶ European mutuals exceeded the total European insurance market’s annual premium growth (2019-2020) in total, life, and non-life business by 5.1, 3.1, and 3.1 percentage points, respectively.

European market summary

In 2020, at the outset of the COVID-19 pandemic, the European insurance market reported a negative growth¹ in premium volume of -6.7% (in euro terms²) from the previous year. It was the first time the region had reported a decrease in annual premium levels since 2016 and consisted of a -10.6% contraction in life business and a +0.3% growth in non-life business.

Whilst not immune to the market’s decline, the European mutual and cooperative³ (hereafter referred to as mutual) insurance sector performed favourably in comparison, exceeding the total European insurance market’s annual premium growth in total, life, and non-life business: by 5.1, 3.1, and 3.1 percentage points, respectively.

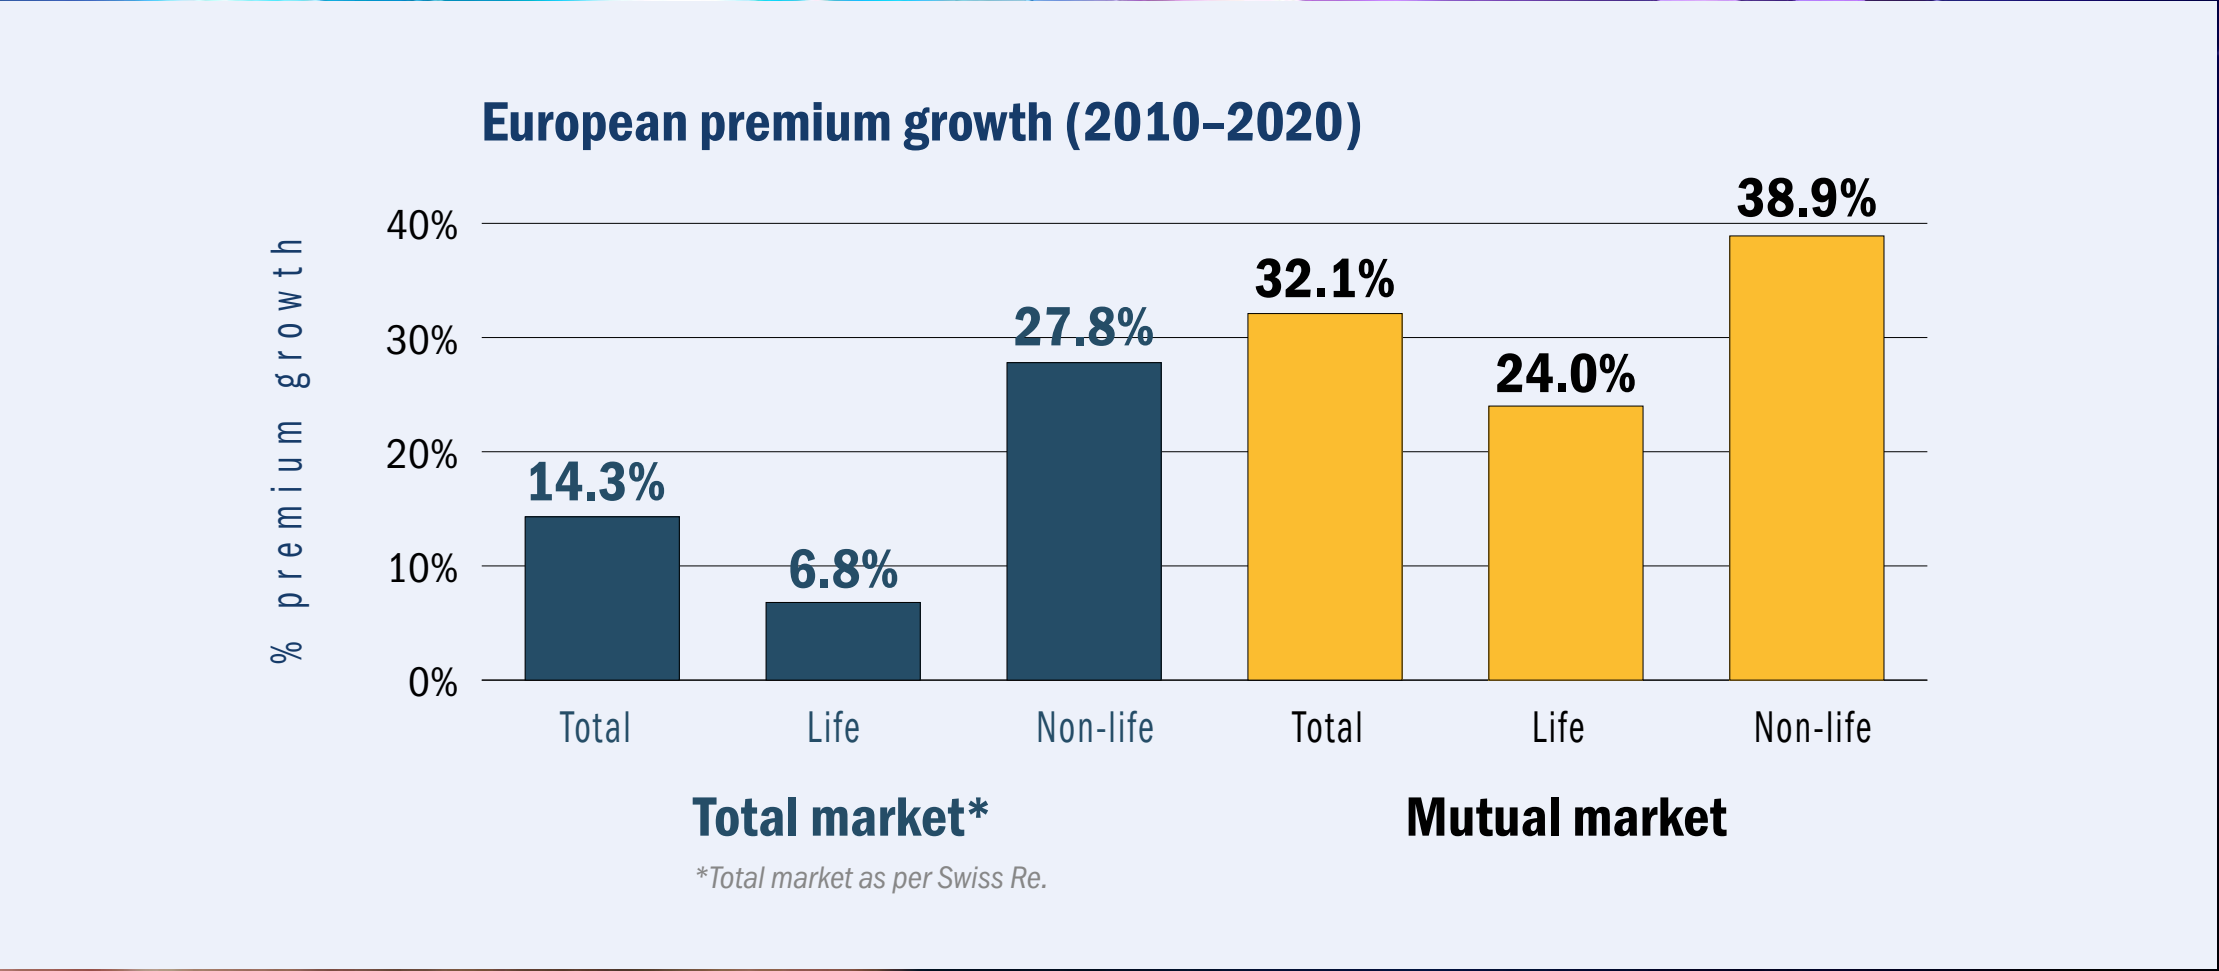

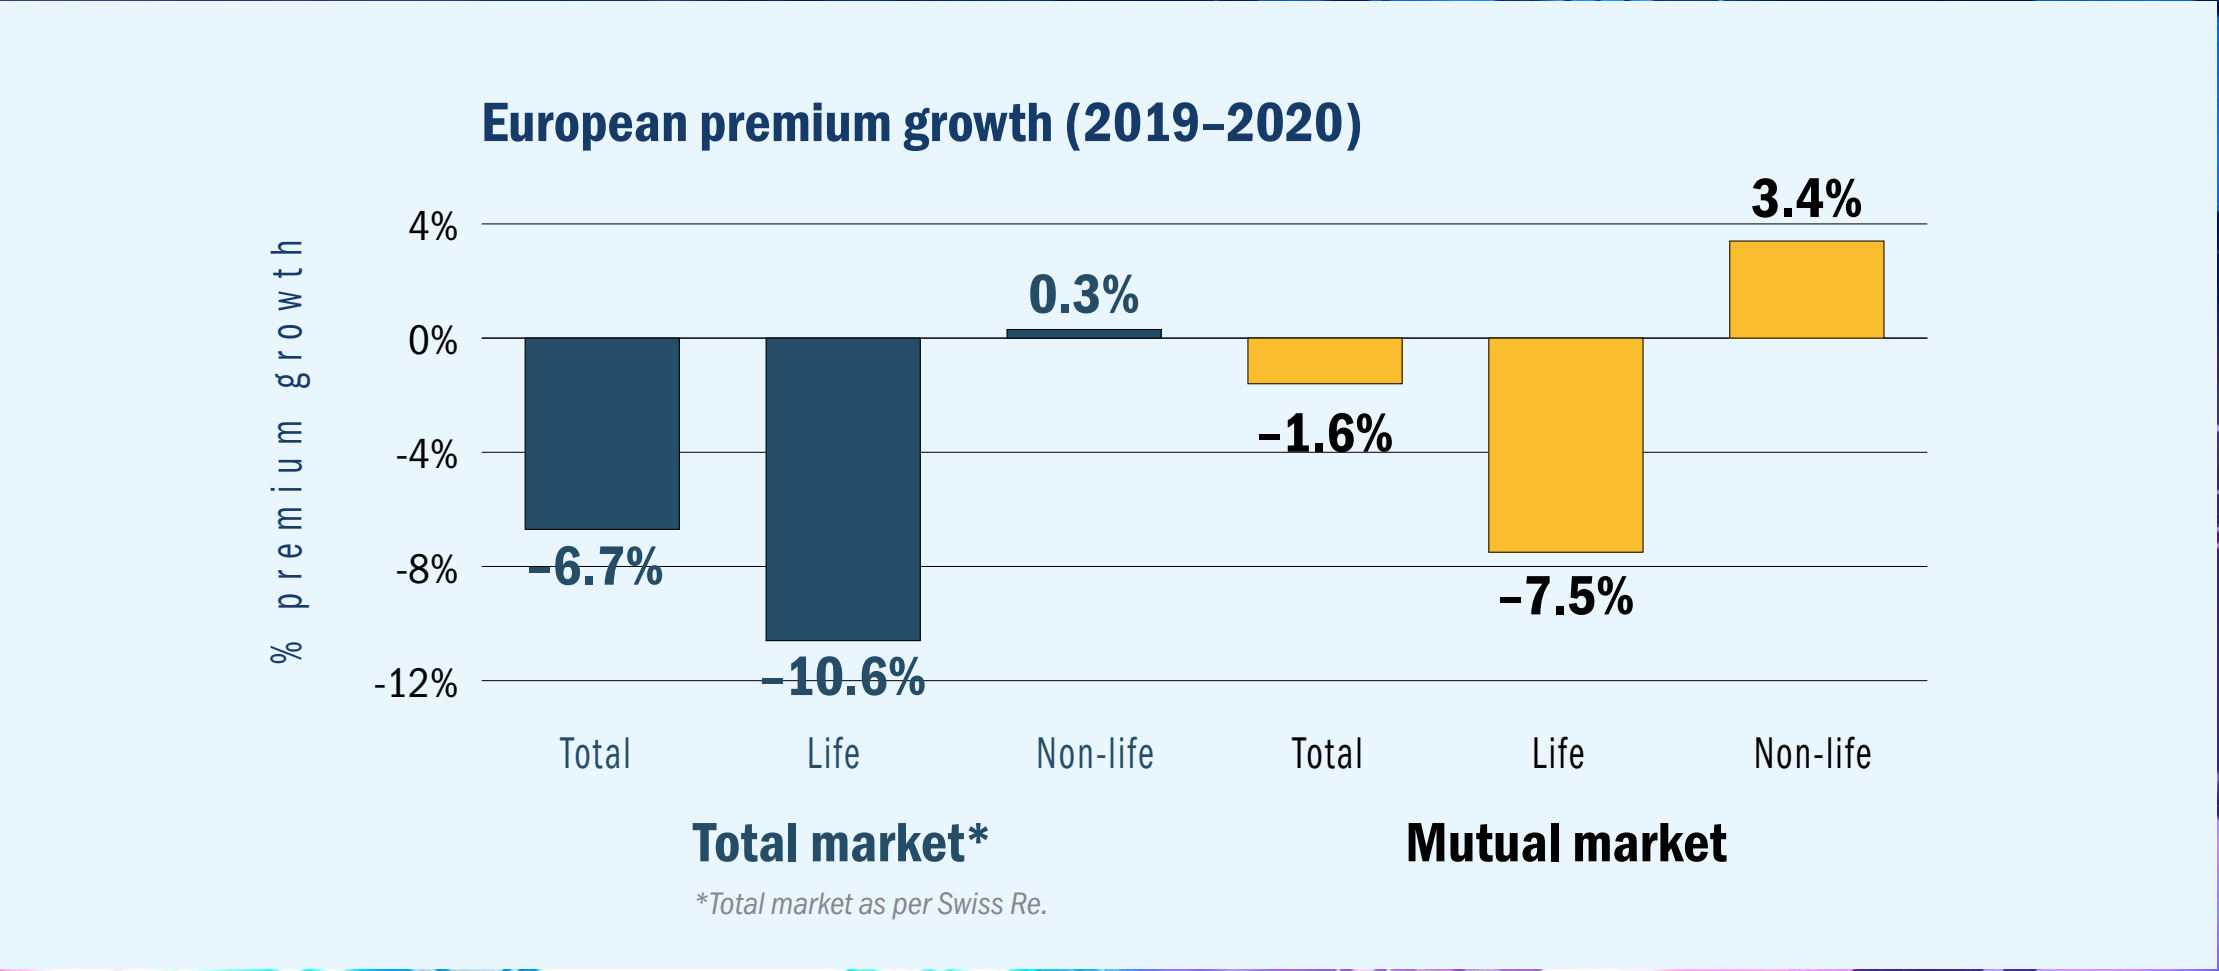

Since 2010, the European insurance market has seen its total premium volume increase by 14.3%, consisting of a 6.8% growth in life business and a 27.8% growth in non-life business.

Over the same period, European mutuals saw their total premium volume increase by 32.1%, exceeding the total European insurance market’s growth by 17.8 percentage points. European mutuals’ life business grew by 24.0%, exceeding total market growth by 17.2 percentage points. European mutuals’ non-life business grew by 38.9%, exceeding the total market growth by 11.1 percentage points.

European mutual market

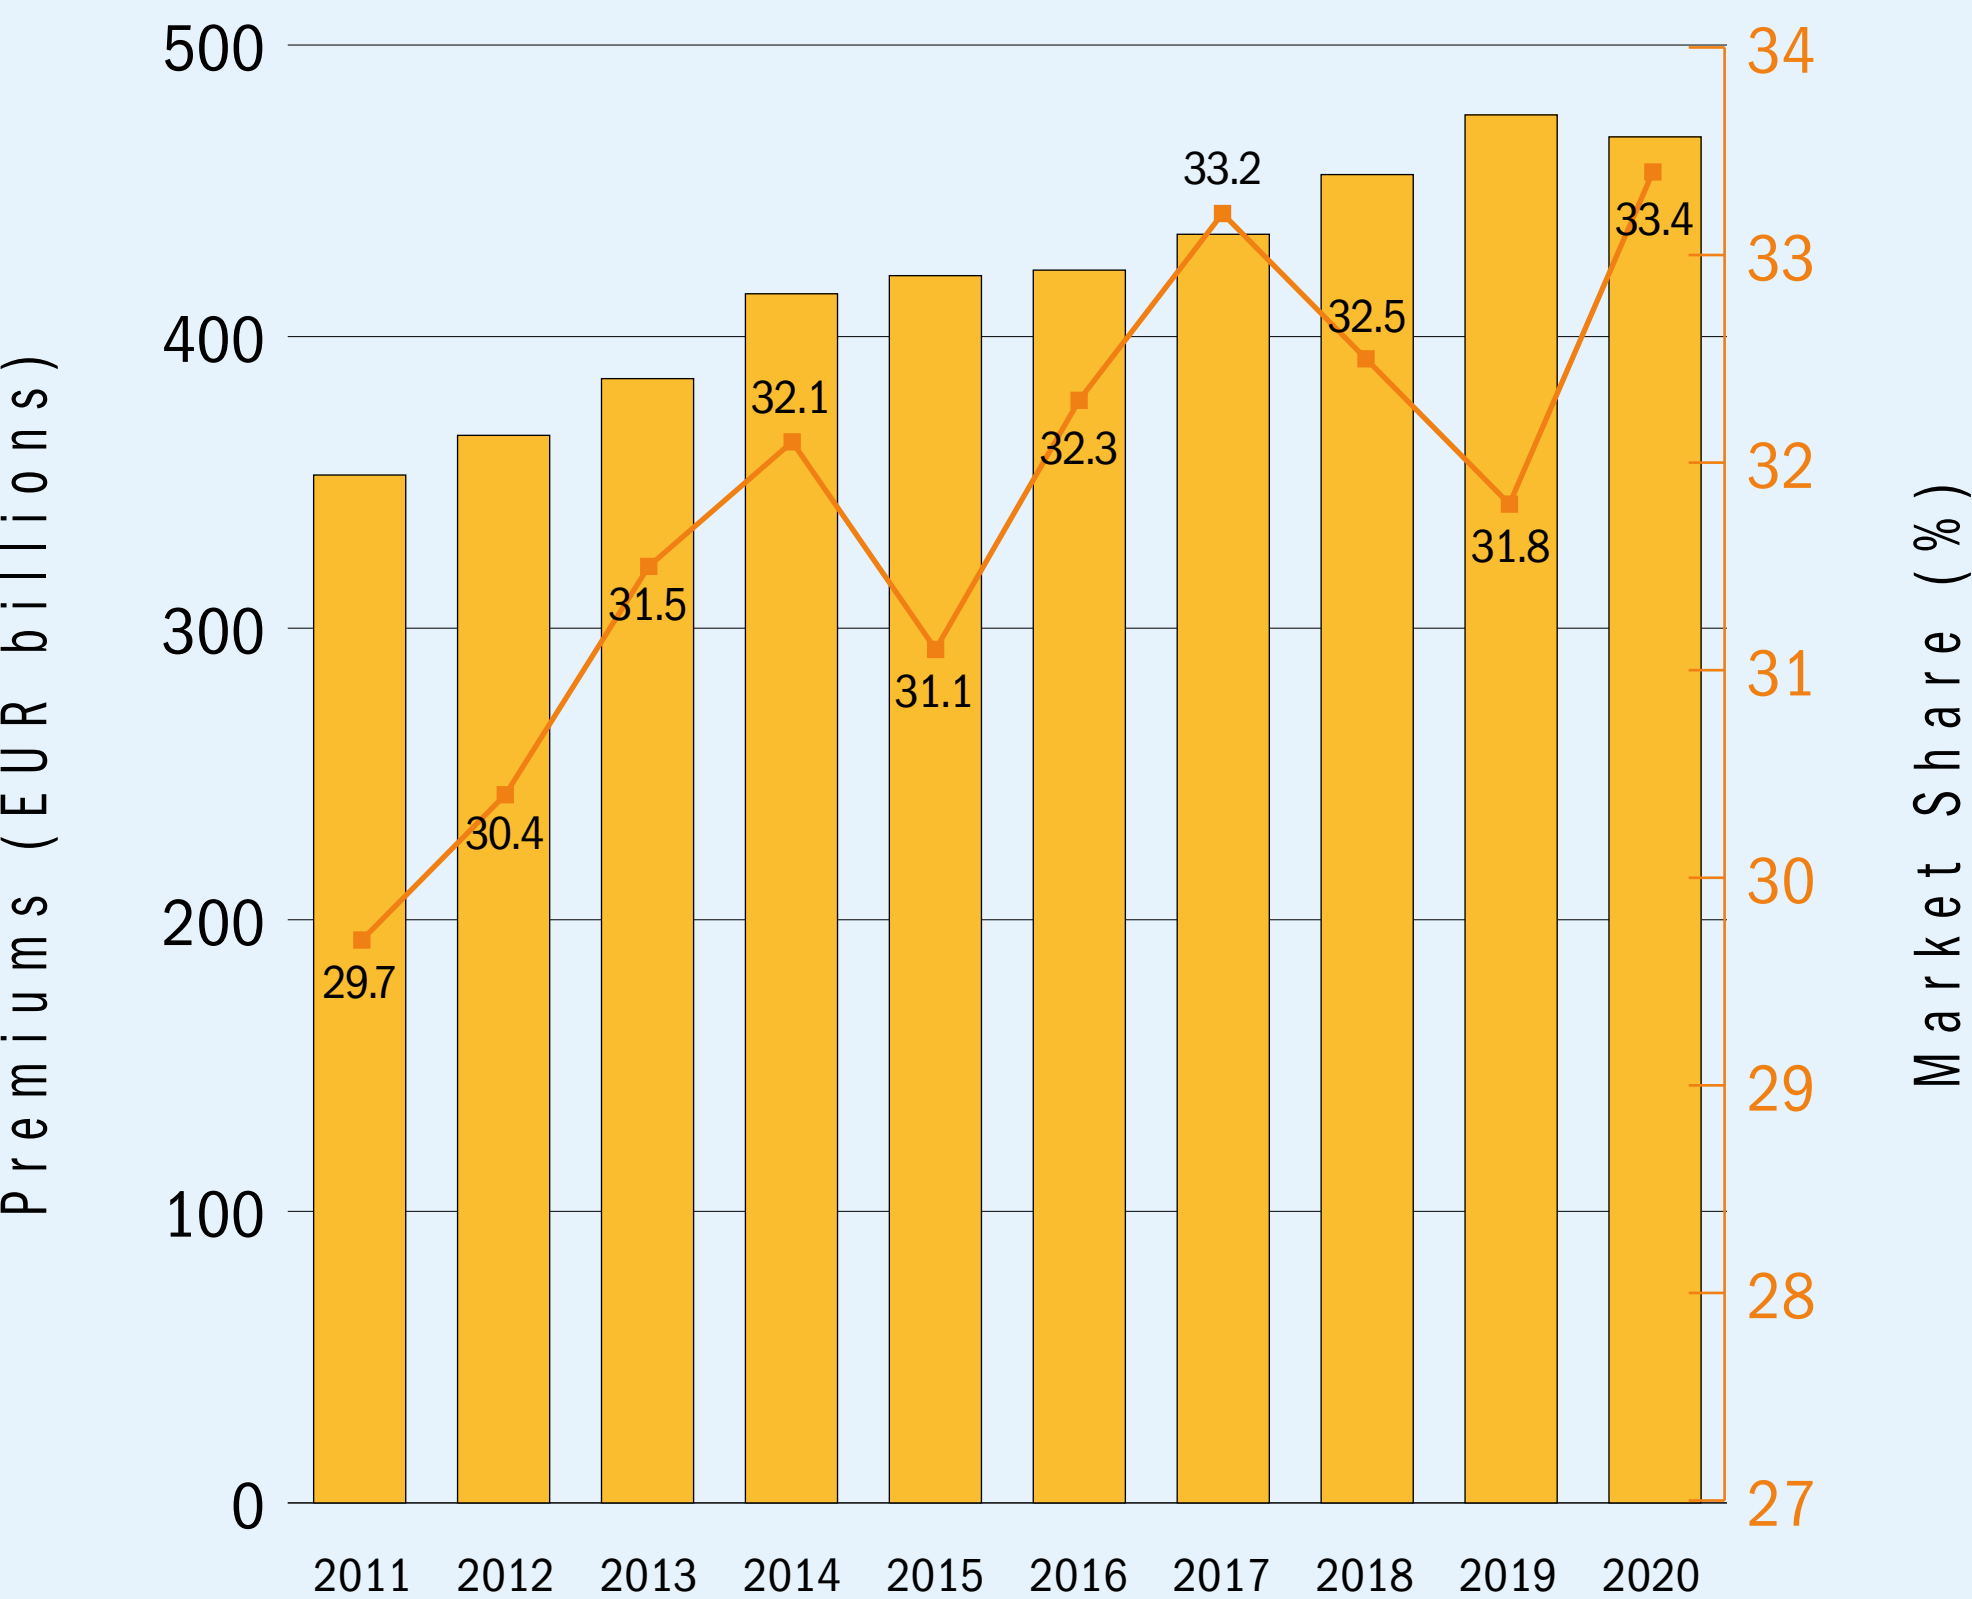

European mutual insurers collectively wrote EUR 469 billion in insurance premiums in 2020. This represented a negative annual growth of -1.6% from the previous year (2019: EUR 476 billion). This figure represents a five-year growth of 11.3% and a ten-year growth of 32.1%.

The mutual sector has consistently outperformed the total European insurance market, with annual growth of the mutual market exceeding that of the total market in six of the past seven years. The mutual market sector has recorded eight years of positive premium development between 2010 and 2020.

As a result, mutual insurers' collective share of the European market reached a record high of 33.4% in 2020 (2019: 31.8%), a 9.2 percentage-point increase from the figure of 24.2% in 2007.

Mutual insurance accounted for more than a quarter of 13 national insurance markets in 2020, and more than 40% of the market in four of the ten largest European markets, including three of the five largest European markets (Germany, France, and the Netherlands). The Netherlands (60.2%) had the highest penetration of mutual insurance in 2020.

European mutual life and non-life business

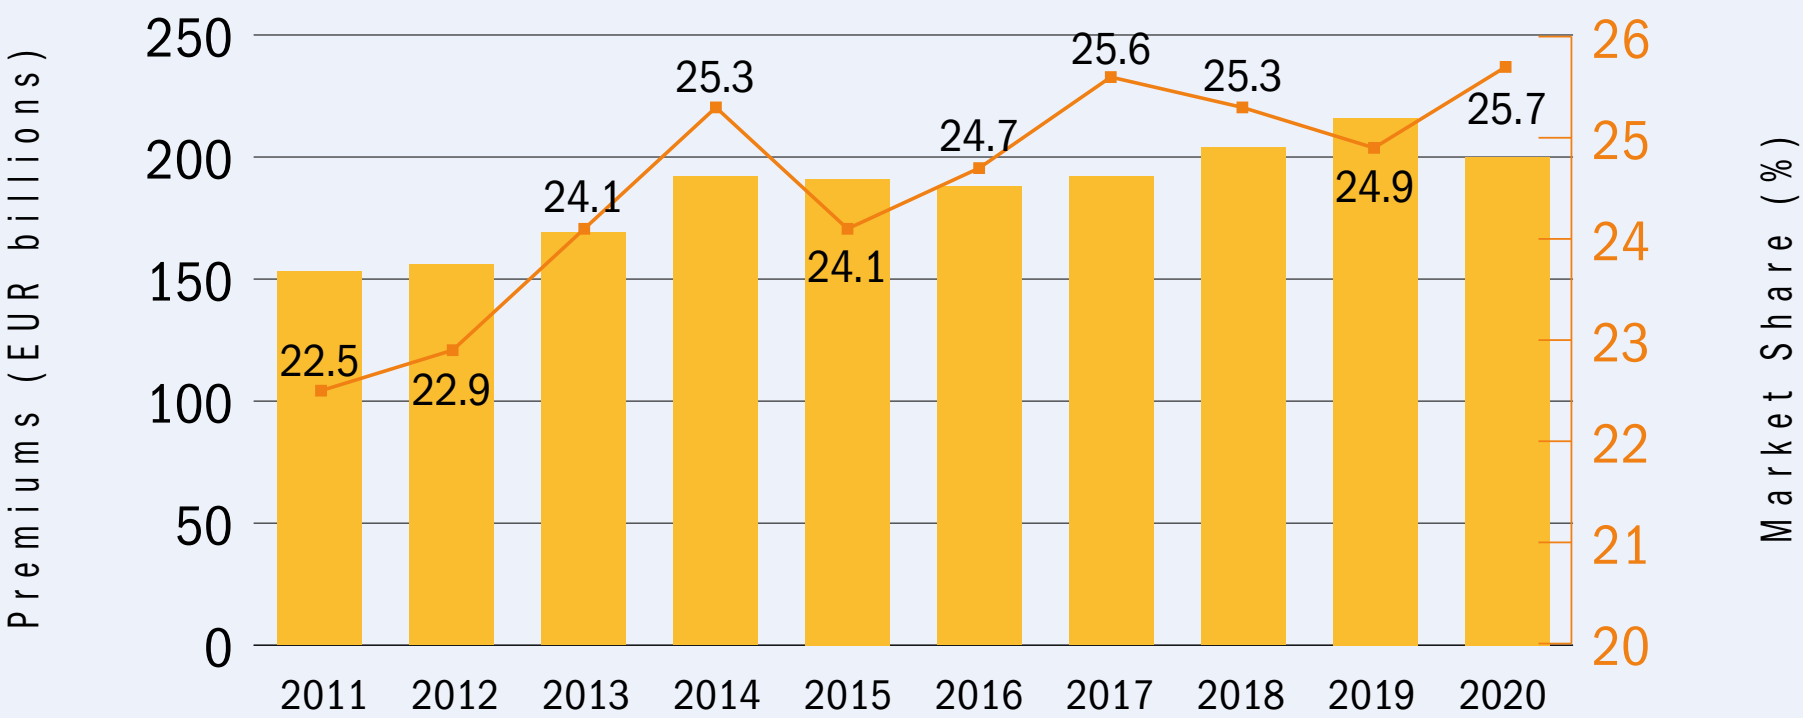

Life business was the main contributor to the overall decrease in total premium volumes in 2020, with the total European life insurance market shrinking by -10.6% from the previous year. This is something that was seen on a global scale in 2020, as the total worldwide life insurance market posted a contraction for the first time since 2015.

Mutual life insurers saw premium volumes decline by -7.5% to EUR 200 billion in 2020 (2019: EUR 216 billion). This lesser decline, relative to the total European insurance market, saw European mutuals' share of the total European life market increase to a record high of 25.7%, an 8.5 percentage-point increase from 17.2% in 2007.

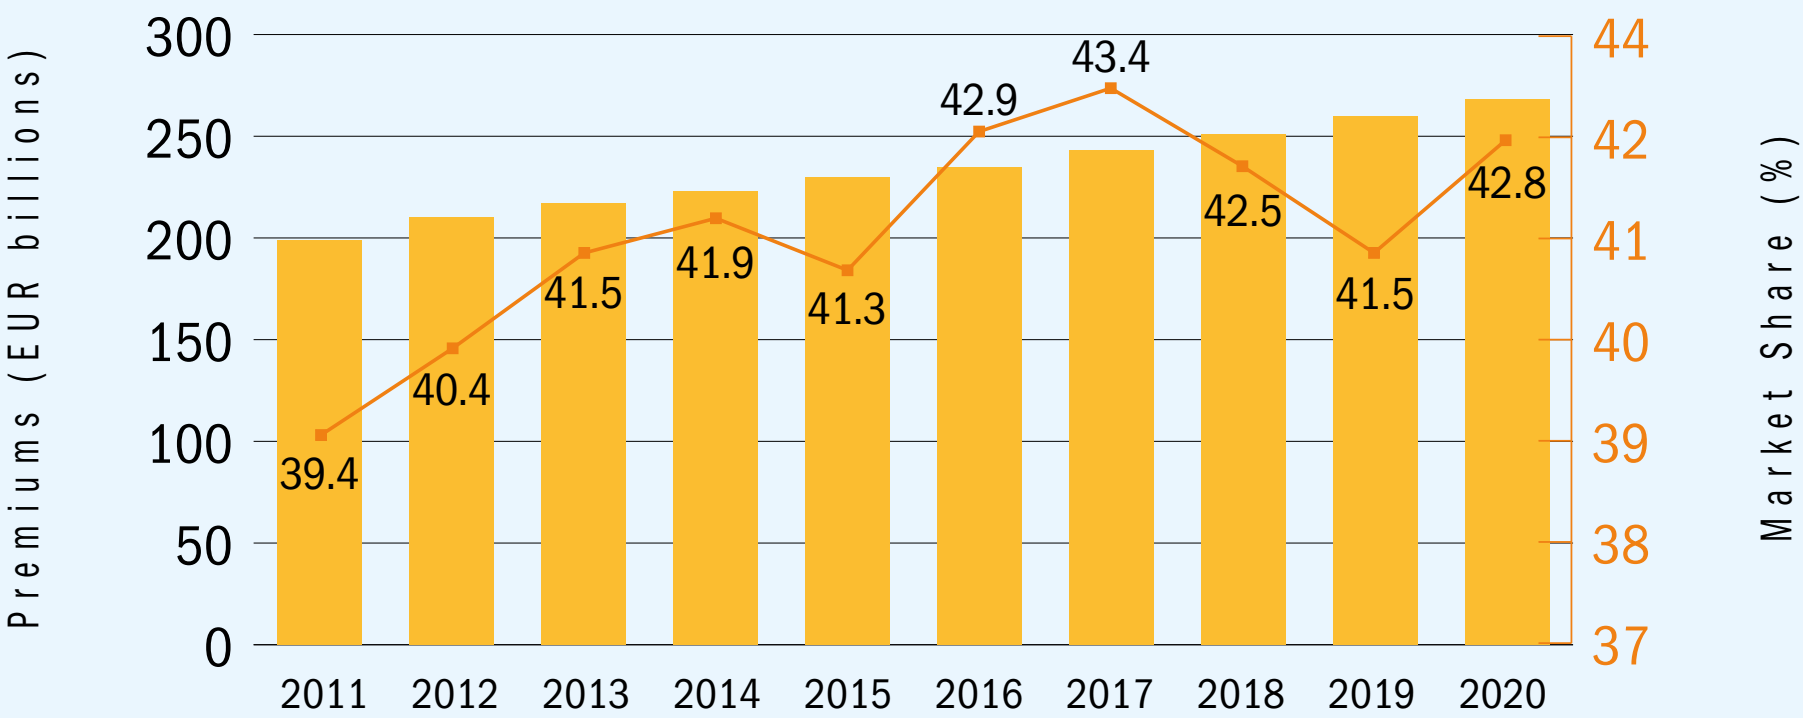

In the non-life market, the total European insurance market saw premium volumes increase by 0.3% in 2020.

European mutuals' non-life business increased by 3.4% to EUR 268 billion in 2020 (2019: EUR 260 billion), continuing a year-on-year increase going back to 2007. This resulted in a market share of 42.8% in 2020, a 7 percentage-point increase from 35.8% in 2007.

⁴ French mutual market figures include premiums for complementary health insurance. Adjustments to total premium volumes in France have been made to include for complementary health insurance, previously not included in Swiss Re's total market data.

⁵ Statutory pension business is not included in the mutual market share figures for Finland. If it was included, the total market share in 2020 would be 75.2% (2019: 78.6%) and the life market share would be 73.9% (2019: 79.5%).

⁶ In Germany, health insurance is classed as a life insurance product. However, to ensure consistency with Swiss Re's sigma data, it has been classed here as a non-life product.

Methodology and data

As the only global federation for the mutual and cooperative insurance sector, ICMIF is often consulted by its members, regulators, governments, policymakers, legislators, the media, academics, researchers and other trade associations about the size and performance of the mutual/cooperative insurance sector compared to the total industry, at a national, regional or international level. The objectives of the research that goes into this report are to provide a definitive response to this question, based on rigorous calculation of the size of the mutual/cooperative insurance sector and, from this, to highlight the socio-economic importance of mutual and cooperative insurers.

Financial data from a sample of 30 countries, which together represent approximately 99% of the European insurance market, was gathered from annual reports, regulatory returns and external research. ICMIF’s definition of “mutual” and “cooperative” in this report includes organisations whose legal status may not be classified as such in their national law, but whose structure and values reflect the mutual/cooperative form, i.e. companies which are owned by, governed by and operated in the interests of their member policyholders. These include limited companies owned by people-based organisations, friendly societies, non-profits, exchanges, discretionary mutuals, protection and indemnity (P&I) clubs, community organisations, and foundations. Extending the definition in this way has enabled us to include all organisations which operate on mutual/cooperative principles, in line with our research objectives, without being restricted by legal definitions of which there is a wide variety across the globe and of which some are particular to one country or organisation alone.

For groups of companies, whether their operations be national or multinational, figures for the whole group, including majority-held subsidiaries, have been included. Where possible, business written outside the group’s home country has been deducted from the national figures in the mutual market share data and added into the country where the business has been written. The financial data gathered for each mutual/cooperative insurer (as defined above), has been analysed to determine gross premium income figures from 2007 to 2020 (inclusive).

The totals for each country have then been compared to national total premium data as produced by Swiss Re⁷ (and verified against additional data obtained from regulators, financial press, national trade associations and rating agencies), and aggregated to produce regional and worldwide statistics. Due to reporting year differences in certain markets, figures for Swiss Re data have been adjusted to ensure year-on-year consistency. Therefore, variations may be noted in total market premium and growth figures in this report compared to the Swiss Re data, as well as some revisions to past year’s figures. Figures in the Swiss Re report have also been adjusted to include insurance business that is not covered in their data⁸, and to also include figures from certain countries⁹ not included in their report.

Variable currency exchange rates have been used for the different years, with all figures converted into Euros (EUR). This allows for a more accurate calculation of mutual market share, as exchange rates are consistent with those used by Swiss Re to calculate global and regional figures. Growth figures of individual markets have been calculated in local currency throughout the report in order to eliminate the misleading effects of exchange rate fluctuations and thus ensure accurate year-on-year comparisons.

⁷ Swiss Re, *sigma 3/2021 – World insurance: the recovery gains pace*, July 2021

⁸ In France, premiums from complementary health mutuals (known as “Mutuelles 45”) and non-profit provident institutions are not included in Swiss Re’s figures on the total French market. Therefore, Swiss Re’s total market data (from 2007 to 2020) has been adjusted to include all complementary health insurance.

⁹ Figures on the total market in Lithuania, Estonia and Latvia were obtained from national regulators and supervisors.
